

SUMMER INTERNSHIP

Summer 2011

*Want to experience what it means
to be an MEP engineering consultant?
Consider an MKK summer internship!*

MKK's summer internships last two to three months and give students the opportunity to learn more about what a career in engineering consulting can offer.

Our interns work on real projects and are mentored by MKK team leaders, project managers, and engineering consultants to get the true feel for what the life of an engineering consultant is like. Interns are assigned to client projects and given responsibility for portions of the work that

commensurate with the intern's interest and focus area (mechanical, electrical, plumbing, or a combination), college coursework, knowledge and skills. They participate in project meetings and interact with project team members in order to experience the day-to-day work of professional consultants. The work offers opportunities for interaction with MKK principals and associates as well as project managers. Interns can also participate in various training sessions to gain additional knowledge, site visits to see the fruition of our consulting efforts, and company social events to get to know the people they may one day work with.

MKK
CONSULTING ENGINEERS, INC.

50 years and counting!

We are currently interviewing candidates for two summer internship opportunities in our Denver office. Our internships are paid and a housing allowance is also available.

The best qualified internship candidates are generally architectural engineering students with three or fewer semesters of coursework left to complete.

Consult More. Consume Less.
